

Let's talk sustainability

We only use electricity generated from renewable sources which have zero carbon emissions.

We've reduced our food waste by offering a Mezze platter and eliminating the buffet.

We have LED lighting throughout our resort.

We have eliminated our single use slippers. To dispose of one pair of slippers, generates 10lb of CO2 emissions (the same as keeping a 100w bulb on for 2 days!).

We use minimal plastics in the spa and hotel, replacing plastic cups with paper and bed sheeting/treatment mats with compostables.

www.wybostonlakes.co.uk/sustainability

By having renewable electricity, we save 1,330 tons of CO2e from Wyboston Lakes carbon footprint. That's 65% of the total emissions.

> We have 26 electric car charger points across site.

Our new self check-in service saves around 90,000 pieces of paper or 36 reams a year from being wasted.

We have an active bio diversity project on site, running a nature reserve and planting 1,000's of trees on the resort each year.
